

Elson Lopes

MID-LEVEL .NET DEVELOPER | C# / ASP.NET CORE / SQL SERVER

Lages, SC — Brazil • elsouzalopes@gmail.com • +55 48 99831-8201

LinkedIn: linkedin.com/in/elsonlopes • GitHub: github.com/Elsonc1 • elsonc1.github.io

PROFESSIONAL SUMMARY

Mid-level .NET Developer with 6+ years in IT — the most recent years focused on C#/.NET development (promoted from Junior to Mid-level) and the earlier years on analysis of complex fiscal systems. Full-lifecycle work on mission-critical enterprise systems: REST APIs with ASP.NET Core and Web API, multi-database architecture (SQL Server, Oracle, Informix) with Entity Framework Core and NHibernate, applying SOLID and Clean Architecture with unit testing. Specialist in electronic tax documents (NF-e, CT-e, NFS-e) and multi-state government (SEFAZ) integrations. Maintainer of LayoutParser, a self-driven ecosystem in production with a .NET 10 API, local AI (Ollama, RAG) and E2E testing, currently being evaluated for commercialization. Fullstack experience with React and TypeScript. Open to Mid-level .NET Developer roles (remote or Lages/SC, Brazil).

TECHNICAL SKILLS

Languages: C# (.NET Framework 4.5–4.8, .NET Core, .NET 8), TypeScript, JavaScript, T-SQL, PL/SQL, Python

.NET Frameworks: ASP.NET Core, ASP.NET MVC, Web API, Entity Framework Core, NHibernate / FluentNHibernate, WPF, WinForms, Windows Services

Architecture & Patterns: Clean Architecture, SOLID, Dependency Injection (Spring.NET, SimpleInjector), REST, SOAP, messaging (NServiceBus, MSMQ, RabbitMQ), enterprise workflows

Databases: SQL Server, Oracle, IBM Informix, PostgreSQL, MySQL, SQLite

Testing & DevOps: NUnit, xUnit, Moq, Git, GitHub Actions, Azure DevOps, MSBuild, Swagger / OpenAPI

Frontend: React, Vite, Tailwind CSS, Angular, HTML5, CSS3

Applied AI: RAG + few-shot with local Ollama (on-premise fiscal data), automated XSLT/TCL generation, GitHub Copilot, MCP Server for architectural pattern validation

PROFESSIONAL EXPERIENCE

Software Developer .NET (Junior to Mid-level) — NDD Tech

Jun 2024 — Present

- Develop and maintain electronic tax-document systems (NF-e, CT-e, NFS-e) in C#/.NET with multi-state SEFAZ integration for enterprise clients.
- Implemented multi-database architecture with NHibernate/FluentNHibernate supporting SQL Server, Oracle and Informix from a single code base.
- Applied SOLID and Clean Architecture principles, with NUnit/Moq unit tests and peer code review.
- Contributed to the Alphanumeric CNPJ migration across high-volume tables, including decomposition and recomposition of the fiscal access key.
- Built REST APIs with ASP.NET Web API and ASP.NET Core, documented via Swagger/OpenAPI.
- Developed integration components (SAP, Web Service, FTP, Email, MQ Series) on the AppConnector platform and workflows on the MicroFlow engine with NServiceBus/MSMQ.
- Configured IoC with Spring.NET and SimpleInjector; authored database upgrade scripts for SQL Server, Oracle and Informix.
- Used GitHub Copilot and MCP Server to speed up delivery and validate architectural patterns.

Project Analyst — NDD Tech

Jun 2021 — Jun 2024

- Advanced analysis in complex fiscal environments (NF-e, CT-e, MDF-e, NFS-e) over SQL Server, Oracle, MySQL and Derby.
- Automated configuration-file analysis with Python, speeding up incident diagnosis.
- Bridged support and engineering teams, transitioning into a C#/.NET development role.

Technical Support — HSI Automação Comercial

Sep 2020 — Jun 2021

- Homologation of NFC-e, NF-e, CT-e, PAF-ECF, SAT and NFS-e; issuance of SPED Contribuições, SPED ICMS (profiles A and B) and SINTEGRA.
- Delivery-app integrations and fiscal/non-fiscal printer setup over PostgreSQL, SQL Server, Firebird and MySQL.

Technician — Inovacell

Mar 2017 — Aug 2018

- Hardware and software maintenance and technical support.

SELECTED PROJECTS

- LayoutParser — self-driven side project, in production (github.com/LayoutParser · layoutparser.duckdns.org). Ecosystem of 6+ repositories: .NET 10 API with 20+ controllers, Redis cache, SQL Server and Serilog/Elastic observability; local AI layer (Ollama, RAG + few-shot) that learns to generate XSLT/TCL transformations from XML layouts; React/Vite frontend with a Node/Fastify gateway; Cypress E2E suite validating real fiscal acceptance against a simulated SEFAZ environment. Actively deployed; being evaluated for commercialization as a product/service.
- nddConnect Client — Multi-database fiscal platform (SQL Server, Oracle, Informix) with SendDoc, EntryDocuments and EmissionDocuments modules and SEFAZ integration. C#, .NET 4.6.2, NHibernate, Spring.NET.
- TransportBidPortal — REST API for transport bidding with JWT authentication, EF Core and SQL Server. .NET 10, ASP.NET Core, Swagger.
- Gastos Residenciais — Fullstack expense-tracking app. React + TypeScript + Tailwind frontend, ASP.NET Core + EF Core + SQLite backend.
- MicroFlow — Pluggable workflow engine with database, web-service and email components and NServiceBus/MSMQ messaging.

EDUCATION

Bachelor's degree, Computer Science — Centro Universitário Unifacvest (2023 — 2027)

Associate degree, Systems Analysis and Development — UNOPAR (2020 — 2023)

Database Implementation — Fundação Bradesco (2019 — 2020)

Technical Course, Software Development — Senac Santa Catarina (2019 — 2020)

LANGUAGES

Portuguese — Native • English — Advanced • Spanish — Intermediate
